PROFILE

Full stack web developer with experience in creating pages and web applications, I have solid programming concepts with the use of various technologies. With the ability to provide solutions to customer needs and meet the company's objectives. I have good attention and observation to detail in the implementation of design improvements and code verification in projects. I like to constantly learn to improve every day and stay updated with the latest trends in technological innovation and industry practices.

PROJECTS

- Web application to request orders in a restaurant, developed with Next.js, Prisma, and Tailwind CSS.
- Web application to show the weather status in some cities along with your country, developed with Vite.
